

Black Spot Project - #1044 Mount Nebo Road

Scope

This project extends along a 100m section at #1044 Mount Nebo Road. The scope of the work includes widening the carriageway on the outside of a bend, improving consistency of curve and application of superelevation, improving comprehension of curve with enhanced delineation and signage, and building-up road shoulders to match new surface profile.

Crash Summary

The need for this project was identified as a black spot based on 6 single vehicle off carriageway on curve type crashes involving 5 motorcycles and one utility over period 2014 – 2016. In 4 of the crashes the vehicles were travelling east and 2 were travelling west around a substandard curve with poor delineation, narrow lanes, unsealed shoulders and poor superelevation.

Funding

Council has secured 100% grant funding from the Federal Government. The estimated project cost is \$492,000
